Altos Research Value Statistics		
Market Action Index	<b>Cold! Buyer's</b>	19 ← →

Altos Research calculates the Market Action Index which measures available supply relative to the current level of demand. Index value above 30 indicates conditions favor the seller. See the section below for full details.

Trend Key

Last Month's Trend  
 Last Quarter's  
 No Clear Monthly/Quarterly

\*Metric "Absorbed this Week" covers properties sold and those taken off the market for other reasons. Since sales sometimes take months to close, it is impossible to discern in real-time exactly which properties sold.

## Characteristics per Quartile

Quart	Median Price	Med. Sqft.	Med. Lot Size	Bed	Bath	Med. Age	Inven.	New	Ab-sorbed	Avg. DoM
1	\$ 1,524,500	2,481	8,001 - 10,000 sq ft	4.0	3.0	45	18	0	1	79
2	\$ 1,123,500	1,890	4,501 - 6500 sq ft	3.0	2.0	53	18	1	1	89
3	\$ 899,000	1,679	4,501 - 6500 sq ft	3.0	2.0	48	19	1	1	100
4	\$ 708,000	1,104	4,501 - 6500 sq ft	3.0	2.0	54	19	2	1	136

## MOUNTAIN VIEW

### THIS WEEK

The median single family home price in MOUNTAIN VIEW this week is \$975,000. The 74 homes have been on the market for an average of 101 days.

Days-on-market has been trending up recently but the Market Action Index and inventory levels are basically flat and not providing strong indications for the market.

### QUARTILES

To get a tightly targeted understanding of homes in the market, we break each locale into quartiles. Each quartile is 25% of the homes listed.

Most expensive 25% of homes

Upper-middle 25% of homes

Lower-middle 25% of homes

Least expensive 25% of homes

We'll refer to the quartiles in the trend graphs below.

### PRICE

The market seems to have paused around this plateau. The Market Action Index is a good leading indicator for the durability of this trend.

### QUARTILE PRICES

Often, we find insights by watching pricing trends within the quartile segments. Pricing trends have been lacking strong directional indication lately. Quartile 4 is down, Quartile 1 is essentially flat, while Quartiles 2 and 3 are up in recent weeks. Slack demand sometimes takes hold at either end of the market and converges on the center. Watch for persistent shifts in the Market Action Index for a leading indicator of stronger price moves in the

### PRICE AND VALUE

This is a market where watching the value metrics (like price per square foot) can provide insight that you don't get at first glance. Despite the fact that home prices are rising fairly consistently, the price per square foot of homes listed is declining. Often this can be attributed to new and remodeled homes on the market. Buyers in the area are paying more but also getting more for their money.

### INVENTORY

Inventory has been relatively steady around these levels in recent weeks.

Residential house prices are a function of supply and demand, and market conditions can be characterized by analyzing those factors. Watch this index for sustained changes: if the index falls into the Buyer's Market zone for a long period, prices are likely in for a downward correction.

The Market Action Index (MAI) illustrates the balance between supply and demand using a statistical function of the current rate of sale versus current inventory.

An MAI value greater than 30 typically indicates a "Seller's Market" (a.k.a. "Hot Market") because demand is high enough to quickly gobble up available supply. A hot market will typically cause prices to rise. MAI values below 30 indicate a "Buyer's Market" (a.k.a. "Cold Market") where the inventory of already-listed homes is sufficient to last several months at the current rate of sales. A cold market will typically cause prices to fall.

### MARKET ACTION INDEX

The MOUNTAIN VIEW market is currently quite strongly in the Buyer's Market zone (below 30). The 90-day Market Action Index stands at 19. With several months of inventory available at the current sales rate, buyers should find ample choice.

Inventory levels have been relatively consistent relative to sales. Despite the fact that there is a relatively high amount of available inventory, this Buyer's market is still seeing prices move higher. Given inventory levels, these price conditions are relatively fragile. If the market cools off further, the price trend is likely to reverse.

The quartiles can help you answer the question, "How hot is the market for homes in my price range?"

### MARKET ACTION

Not surprisingly given the overall Market Action Index, all quartiles are in the Buyer's Market zone with several months of inventory given the current rate of demand for homes in the quartile. Watch the quartile for changes before the overall market shifts. Often one end of the market (e.g. the low end) will improve and signal a strengthening market before the whole group changes.

### DAYS ON MARKET (DOM)

The properties have been on the market for an average of 101 days. Half of the listings have come newly on the market in the past 70 or so days.

### DOM PER QUARTILE

It is not uncommon for the higher priced homes in an area to take longer to sell than those in the lower quartiles.

## About Altos Research Corporation

Altos Research Corp. reports real-time analysis of the residential real estate market in local markets across the country. All information contained herein is based on properties currently listed for sale and available publicly. When evaluating a particular property, make sure you use comparable sales data in addition to the market trend information available in this report. The data presented in this report is accurate to the best of our knowledge, but cannot be guaranteed as such. Use this report as one input in the real estate decision making process, but do not rely on it for accuracy. Nothing in this report or any other Altos Research publication is a recommendation to buy or to sell real estate. We recommend you work with a licensed real estate agent or broker.
